Java Project
CHAT APP- A DESKTOP APPLICATION
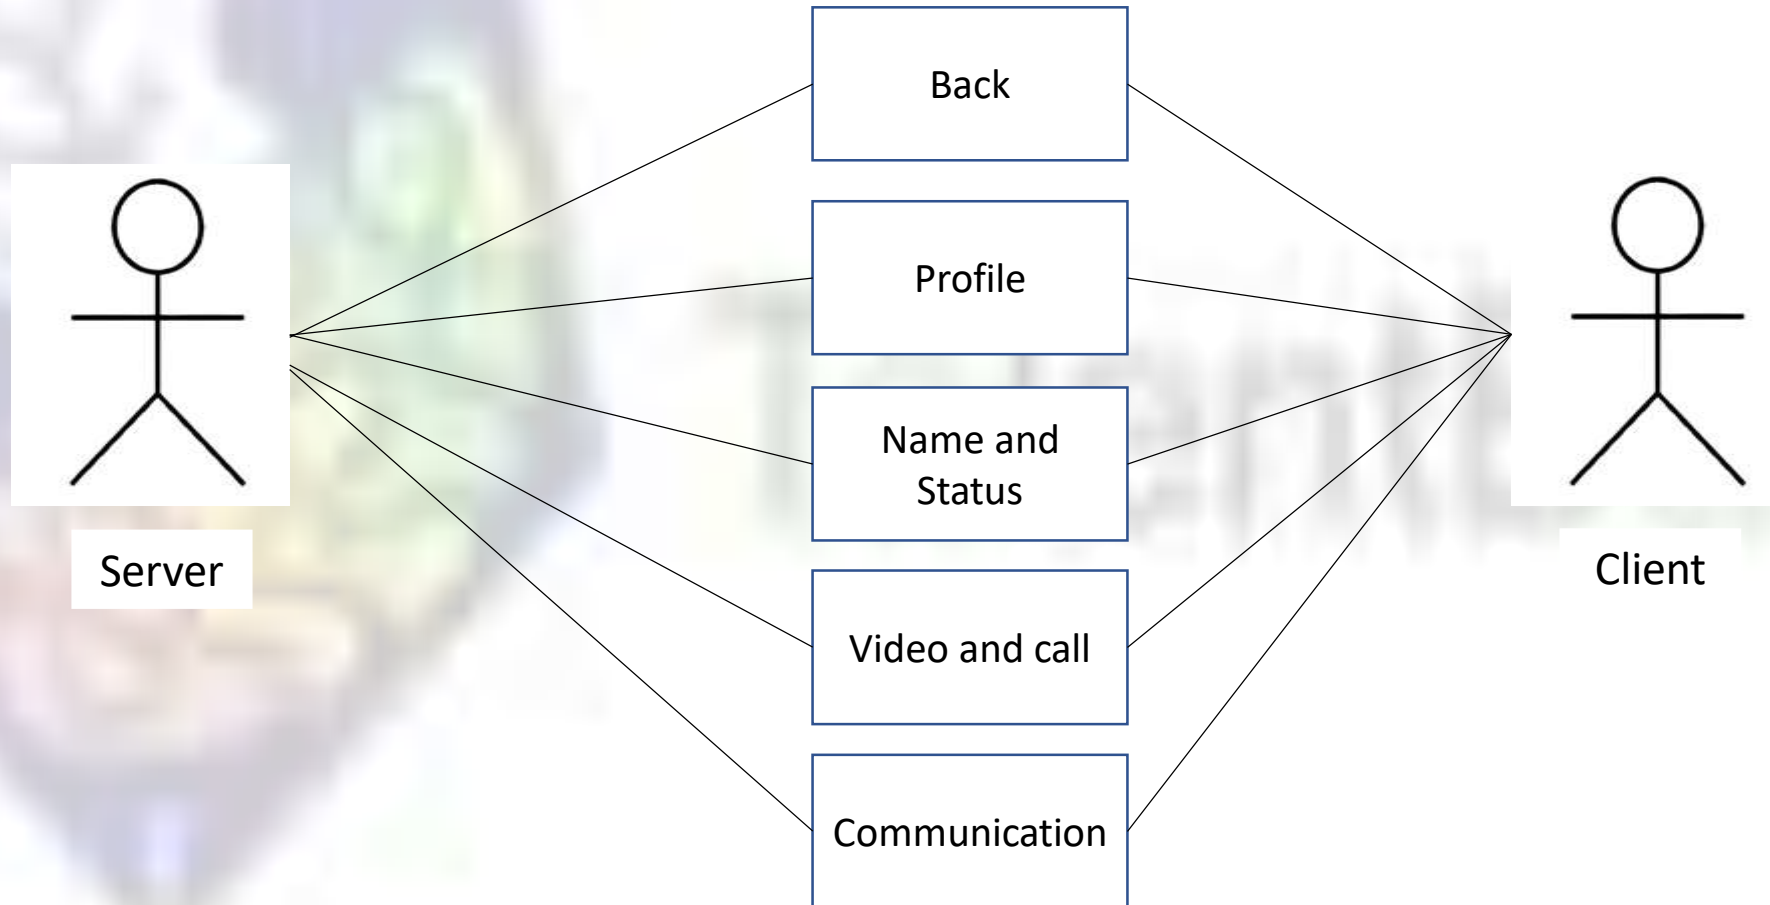

Pre-requisites

- Any IDE, here we are using Eclipse

- Window Builder should be installed in Eclipse

- Basics of Swing and AWT

- Server-Socket Basics

Use Case Diagram

Design

- Make a rough design how the system looks like

- Here we have mainly two pages.
  1. Server

  2. Client

Server Design

- Make a rough design of Server

Client Design

- Make a rough design of Client

Steps Involved

- Install the software required for the project.

- Gather the information for the project.

- Make a design, how your system should look like.

- Find the process that you are implementing in the project.

- Fix the actions to be held.

- Now work on the design part of the project.

- Once design is complete, work on the programming part. Build the source code.

- Test the program and find the errors and fix it.

- Once all errors are fixed, make the final implementation(run) of the code.

THANKYOU
